# EIR - EMPOWERING INDUSTRY AND RESEARCH

- a research and business park in North  
Denmark within health science and technology

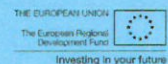

## Eir offers access to and facilitates:

- Interdisciplinary research collaboration
- State of the art research facilities and laboratories
- Pre-clinical and clinical trials  
(medical devices and pharmaceuticals)
- Register-based research
- Integration of companies in research environment
- Start-up companies and innovative entrepreneurship
- International business and research networks
- Collaboration between companies and research environments
- All hospitals and care homes in North Denmark

Situated in North Denmark, Eir is the only environment where biomedical technology and medical research cooperate closely with the health sector (clinical research) and the business community.

Eir is a partnership between Aalborg University, North Denmark Region and Aalborg University Hospital and is partly funded by the European Regional Development Fund.

Esben Hanefeldt, 2012

“Norse mythology tells the story of a powerful and inspiring woman: Eir who was part of Frey’s following and who was considered the goddess of medicine and a patroness for those practicing health care. Ancient literature describes her calm mind and strong will which lent support and empowerment to those around her.”

In the spirit of the goddess and the promotion of health care, Eir – Empowering Industry and Research aims to facilitate development and innovation within the field of health science and technology.
